

Vodafone Requirement | AI Use cases | Service Management

VOIS

AI Use Case | Service Request Automation

Problem Statement:

Fragmented Service Request Processes, Manual Ticket handling (multi-hops) and lack of automation resulting in higher support cost, continued inefficiencies and Poor customer experience.

Potential Solution:

An AI Driven Self serve portal through which a user can raise a Service Request (SR) Ticket, and it should automatically land in correct resolver group queue.

Business

Value

Cost Savings: Automation **reduces manual effort** and **ticket bouncing**, lowering support overhead.

Productivity Gains: Faster resolution times (**MTTR Improvement**) and self-service reduce dependency on support teams.

Customer Centricity: **Unified Customer experience** across geographies **improves collaboration** and consistency.

AI Use Case | Auto Prediction & Assignment

Use Case: Automated Ticket Assignment

Business Context:

Over **16K** - P3/P4 tickets are monthly assigned to Global Service Desk (**GSD**) being then the task is:

- To identify the correct resolver group and
- Assigning the ticket to the right resolver group

Scope:

- Scale of the PoV is to develop a solution /models **that predict the right resolver group** to which the Remedy ticket will be assigned
- It should be proven if a **Model Accuracy level of >95%** can be achieved to fully automate.

AI Use Case | Evolution of Intelligent Ticket Assignment

AI Use Case | Expected Value

LESS ASSIGNMENTS THAT
SERVICE DESK AGENTS
HAVE TO COMPLETE
ANNUALLY

Cost Saving: Direct Automated Assignment **reduces manual effort** and **ticket bouncing**, lowering **support overhead**.

REDUCTION IN HANDLING
TIME (MTTR) THAT IS
REQUIRED TO FIGURE OUT
THE RIGHT RESOLVER TEAM
AND ITS ASSIGNMENT

INCREASED
CORRECT
ASSIGNMENTS

Productivity Gains: Faster resolution times and self-service reduce dependency on support teams.

POTENTIAL EFFICIENCY GAIN
OF 16000 HRS. /YEAR (FOR
THE 16K P3/P4 PRIORITY
TICKETS)

Automation on Global Service Desk

Proposal by Tech Mahindra
23rd March 2026

Table of Contents

EFFICIENT GLOBAL SERVICE DESK

1. Scope Playback

2. Overall Approach

2.1 Discovery Phase

2.2 Transforming GSD with AI PoV

2.3 Success Criteria's

3. Enablement required from Vodafone

4. Assumptions and Dependencies

AI-Driven Automation Transforms Service Desk Efficiency

CURRENT UNDERSTANDING

Misaligned Service Management

- Processes defined, but not aligned to best practices

Manual Remedy Assignment

- Manual ticket assignment needs automation

Automation Goal

- Goal to prove >95% model accuracy for full automation

VOLUMETRIC INSIGHTS

16,000

Tickets/Month (P3/P4 Priority)

Eliminate Manual Handling & Mis-routing

>95% Target Accuracy

Validate >95% accuracy for full automation

Focus: P3/P4 Priority Tickets handled by GSD

OUR PROPOSITION

Two-Pronged Approach

1

Discovery, analysis and correction of underlying data

- Data cleansing and data ckraset of underlying data
- Process mapping and definitn process mapping
- Knowledge base refinement and knowledge base

2

TechM Orion led AI & Automation of Ticket assignment

- Implementing TechM Orion platform for Ticket assignment
- Automated routing to remoree the auto-mama process
- Cognitive automation for tait with ticket anck assignment

Current Ticket Routing Reveals Multiple Bottlenecks

“Understanding why the previous AI failed” to Structuring “AI Foundations and Scaling for accurate Assignment”

~ Roadmap

Phase 1

Discovery, Planning, Data Prep
(0 to 4 Weeks)

- Assess the reasons why previous AI Solutions failed
- Study Data Quality issues across ICMS, Remedy.
- Map out the Data points in the entire process along with Service Mapping check for 1 Business Functions
- Setup the TechM Orion Platform on MS/Azure

Phase 2

Integration, Platform Setup and Model FT
(3rd to 7th Week)

- Perform integration with BMC Helix
- Build AI Model basis Service Mapping, Description and Meta data for 1 Business Function
- Provide GSD with real time insights and setup feedback loop
- Improve Service Mapping as and when required

Phase 3

MVP Show and Future Scale
(8th-10th Week)

- Showcase MVP for 1 Business Function
- Setup the new operating model and guideline for 1 Business Function
- Provide a roadmap to scale to further Business Functions

Track 1 : Discovery and Correction Detail!

WEEK 1 & 2

DATA DISCOVERY & DUE DILIGENCE

Key Activities :

- Conduct stakeholder workshops with VF GSD, Cloud & Infrastructure, and Service Desk leads
 - Location Pune, UK?
- Identify data sources and integration points
- Analyse current Service Request(s) lifecycle: categorization, routing, reassignment, closure
- Identify high-volume mis-routed ticket patterns (Cloud & Infra focus)
- Assess ITSM landscape (BMC Remedy / Helix), CMDB quality, monitoring tools, and change data

Deliverables :

- Due-diligence report
- Current-state process map (L1 → Resolver)
- Mis-routing root cause analysis (symptom vs actual cause)
- Data readiness & integration assessment

WEEK 3-4

DEFINE & RATIONALIZATION

Key Activities :

- Baseline current KPIs: ticket hops, MTTR, reassignment rates
- Define contextual enrichment inputs (CI & dependency data & Historical incident-resolution patterns)
- Rationalize ~2,500 resolver groups into 40–60 logical functional clusters
- Cleanse and normalize ticket metadata
- Finalize success metrics and governance model

Deliverables :

- Refined routing model
- Target-state Intelligent Service Request (s) Routing architecture
- Resolver group clustering model
- AI routing decision flow
- Baseline KPI dashboard

The roadmap below outlines our PoV on the MVP phase focusing on intelligent ticket assignment for one business function. The goal is to validate >95% model accuracy, streamline resolver group routing and establish a scalable foundation for broader rollout across other functions

[illegible]

Evaluating the success of the Tech Mahindra

Tech Mahindra is open for evaluating the performance of the proposal, would like to jointly define Success criteria during 1st week of Discovery.

Metric Categories	KPI	Description
Operational Performance	FTR Assignment by AI Solution for 1 Business Function	
	No. of Re-assignment Reduction	
	AI Model Feedback incorporated	
Use Case Lifecycle Metrics	No. of Use Processes Evaluated	
	No. of Interviews undertaken of GSD Team	

Enablement required from Vodafone

To ensure the success of the AI-enabled intelligent ticket routing solution, active collaboration and foundational readiness from Vodafone are critical. Mentioned below are some of the key enablement requirements that will drive a smooth and impactful implementation.

1. Stakeholder Engagement

- Nominate business function for MVP scope
- Identify SPOCs from GSD, resolver groups, and ITSM teams
- Facilitate stakeholder workshops and discovery sessions
- Provide timely feedback during model validation and testing

2. Data Readiness

- Provide 12–24 months of historical ticket data in a consumable format
- Ensure access to CMDB with updated CI relationships
- Share resolver group mappings and assignment logic
- Supply user profile and organizational hierarchy data
- Provide support in validating data quality and completeness for ML training

3. System Integrations

- API access to BMC Remedy/Helix ITSM platform
- Integration with CMDB, monitoring, and change systems
- Access to knowledge base (KB articles, SOPs, KEDB)
- Connectivity to user communication channels (email, chat, portal)
- Support for integration with identity systems

4. Infrastructure & Access

- Provision secure access to development and test environments
- Enable data extraction and ingestion pipelines
- Ensure availability of compute resources for model training

5. Governance & Compliance

- Approve data usage and privacy compliance protocols
- Align on model governance and retraining cadence
- Define success metrics and PoV / MVP validation criteria
- Support change management and communication planning

6. Operational Alignment

- Align resolver teams on new routing workflows
- Support training for AI-assisted ticket handling
- Enable feedback capture from agents and users

The Future of Efficient Global Service Desk

The question is not whether Agentic AI will transform IT Operations — **it is whether VF will lead that transformation or react to it.**

- ✓ From reactive firefighting to predictive, autonomous operations at machine speed
- ✓ From costly L1 toil to intelligent agent-led resolution without human dependency
- ✓ From siloed tools to a unified, self-improving operational intelligence platform
- ✓ From SLA risk to SLA certainty — powered by real-time multi-agent AI reasoning

NEXT STEPS

1. Executive alignment workshop
2. Current-state assessment
3. Data readiness audit
4. MVP (8 Weeks)
5. Value Showcase
6. Phase 4 Alignment

Thank you
