

AI Transformation in Days.

See it. **Prove it.** Scale it.

From idea to working AI solution in days — and to a board-backed transformation roadmap in under six weeks.

From idea to investment decision — in weeks, not months.

We help organisations move from idea to a working AI solution in days — and to a board-backed transformation roadmap in under six weeks.

Compress time to value

Move past long delivery cycles. Real solutions in days, not quarters.

Prove impact with real systems

End theoretical pilots. Working AI tested on real workflows and data.

Convert proof into funding

Translate measured outcomes into a board-grade business case.

CORE DIFFERENTIATOR

We don't just build fast — we translate speed into quantified business value and investment decisions.

AI ambition is real. Adoption is stalled.

Three traps stalling enterprise AI

01 Strategy without execution

Decks and frameworks that never become working systems.

02 Pilots without scale

Promising experiments that stall on the path to production.

03 Technology without value

Capability deployed without measurable business outcomes.

WHAT EXECUTIVES TELL US

The honest pain points

“We don’t know where to start.”

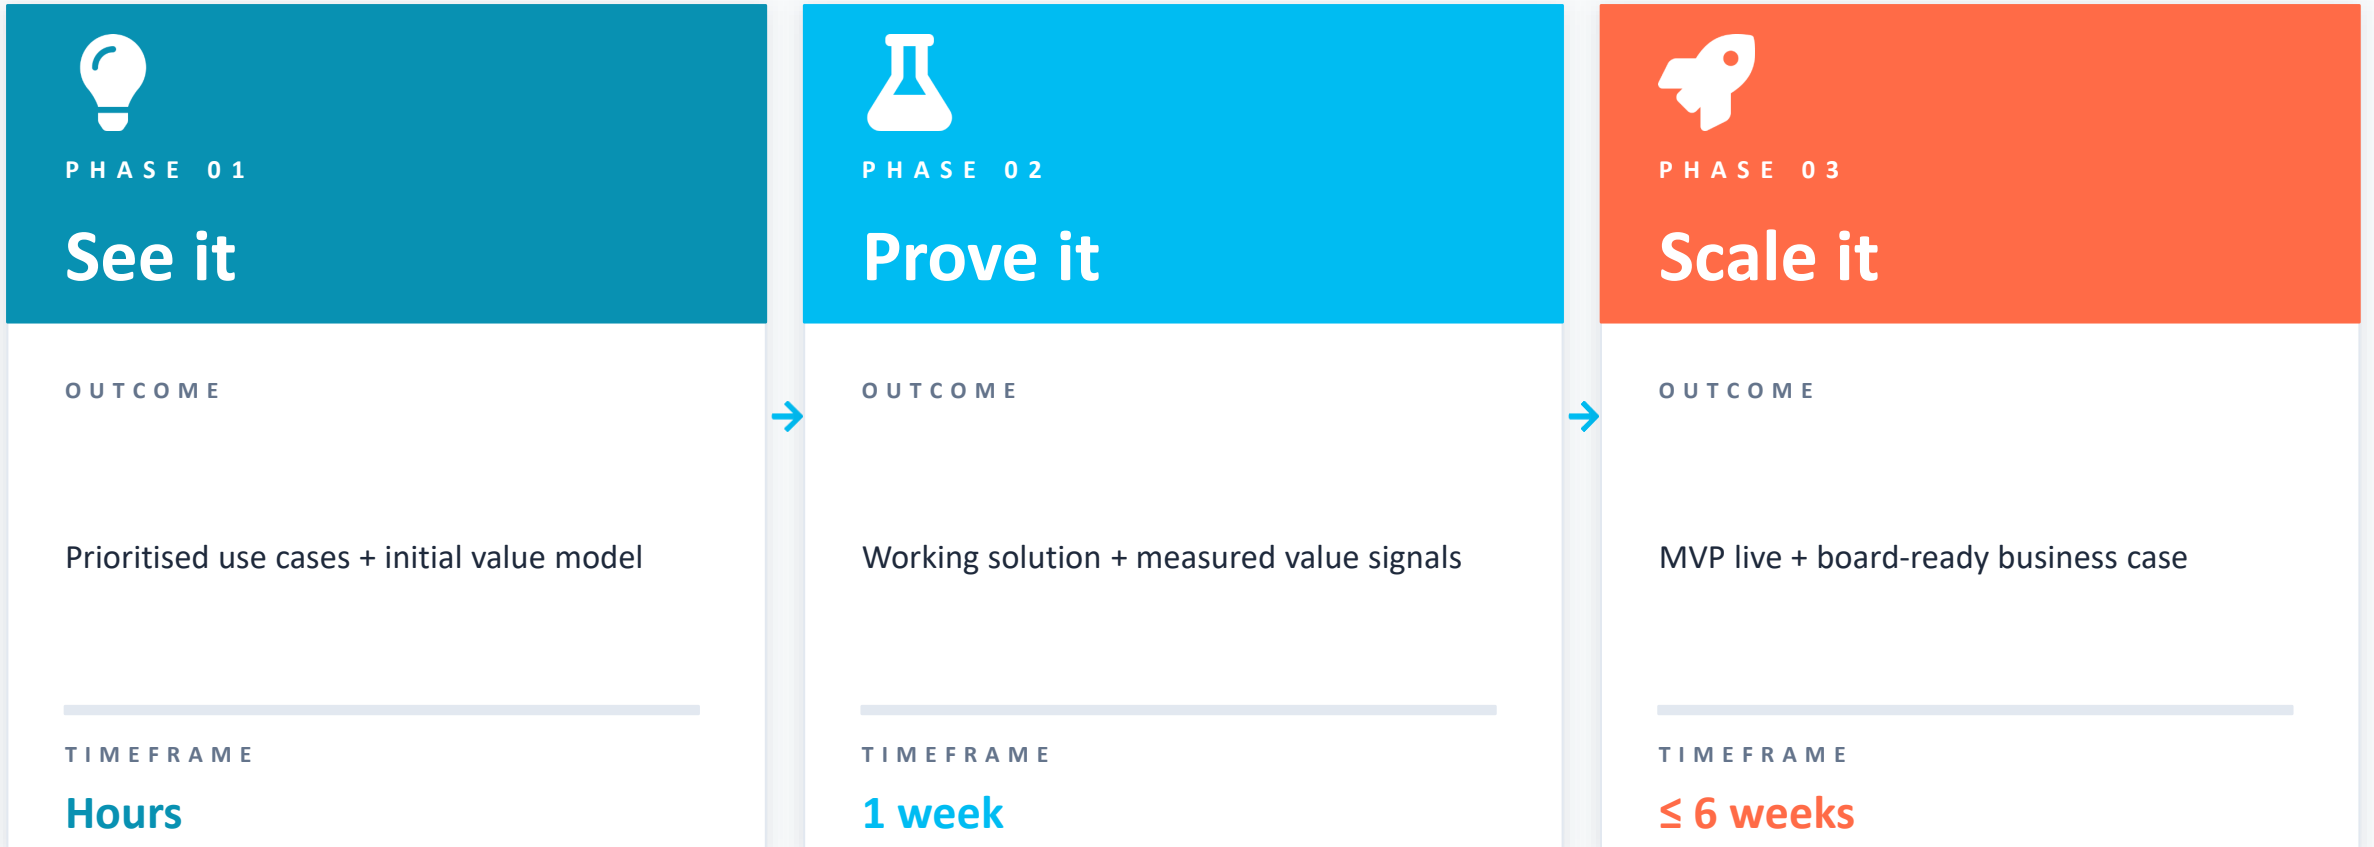

“We can’t prove ROI.”

“Our pilots never scale.”

“We lack the skills to industrialise AI.”

The market gap: no integrated model that builds, measures, and funds.

A structured engagement: speed, proof, financial validation, scale.

CORE PRINCIPLE Speed → Proof → Financial Validation → Scale

PHASE 01

See it.

Create executive belief, prioritise use cases, and anchor financial value from day one.

FORMAT

Half-day IA + Azure GBB workshop. Hands-on co-creation with live agent demonstration.

With customer c-suite

DURATION

Hours

BUSINESS OUTPUTS

Top 3 opportunities, storyboarded — with value already on the table.

Prioritised use cases

Top 3 agentic opportunities ranked by value, feasibility, and data readiness.

Storyboarded workflows

Step-by-step current vs future state, including the human + agent interaction model.

Initial value hypotheses

Time savings per task, FTE capacity released, and revenue upside where applicable.

KEY INSIGHT *Financial value is introduced before any build starts — making the entire process commercially grounded.*

PHASE 02

Prove it.

Demonstrate real-world impact through a working solution and validate financial assumptions with evidence.

FORMAT

1-week rapid build in a sandbox or, preferred, the customer environment.

DURATION

1 week

AI Transformation in Days · See it. Prove it. Scale it.

BUSINESS OUTPUTS

Convert assumed ROI into evidence-based ROI.

Working proof of value

Real, functioning solution executing an end-to-end workflow on agentic + Copilot patterns on Azure.

Measured value signals

Task time vs baseline, productivity uplift, accuracy gain, and adoption / usability feedback.

Refined financial model

Cost savings (hours → £), throughput gains, early revenue indicators, and initial Azure / Copilot consumption view.

KEY INSIGHT

This phase converts assumed ROI into evidence-based ROI.

PHASE 03

Scale it.

Convert proven value into funded transformation and production deployment.

FORMAT

Up to 6-week sprint executed jointly with customer teams.

DURATION

≤ 6 weeks

BUSINESS OUTPUTS

Proof + financial validation → funding → transformation.

MVP in production

Live deployment with real users, real workflows, and measurable business impact.

Board-ready business case

Decision-grade model: quantified benefits, investment (Azure + Copilot + delivery), and ROI / payback profile over 12–24 months.

Transformation roadmap

Next 2–3 agentic capabilities, sequenced by value, complexity, and dependencies.

KEY INSIGHT

Where speed becomes scale: proof + financial validation unlock the funded transformation.

Idea → investment decision, compressed.

See it

Value idea

Prove it

Value evidence

Scale it

Value realised + funded

FINANCIAL STATE

Estimates / hypotheses

FINANCIAL STATE

Measured / validated inputs

FINANCIAL STATE

Fully modelled ROI + investment decision

CORE MESSAGE

We compress the time from idea → investment decision from months to weeks.

Four reasons we're the only partner that can do this end-to-end.

Speed + Reality

01

Live builds — not theoretical workshops. Real systems, not conceptual designs.

Enterprise Context

02

Grounded in real work: documents, meetings, and the workflows people use every day.

End-to-End Platform

03

Build → orchestrate → govern → scale, on one stack. Not stitched-together point solutions.

Financial Credibility

04

Integrated value modelling, data-backed business cases, a direct path to funding.

Speed alone is a feature. Speed + proof + funding is a transformation.

How we mobilise — roles and required assets.

Engagement roles

Role	Responsibility
IA	Business framing, value modelling, executive alignment.
GBB	Solution design, build orchestration, agent patterns.
ATS / STU	Technical depth and Azure architecture when required.
Customer	Co-build, validation, and adoption ownership.

Required assets

Use case library

Curated patterns by industry and function.

Agent pattern templates

Reusable orchestration and Copilot building blocks.

Value modelling framework

From hypothesis → measured ROI → board case.

Reference architecture

Azure-native, governed, ready to scale.

ENGAGEMENT MODEL *One team, four roles, one outcome — a customer ready to fund and scale.*

WHAT CUSTOMERS GET

From idea to impact — impact to investment.

A working AI solution

in days

Proven business value

in weeks

A funded transformation
roadmap

to scale

See it. **Prove it.** Scale it.

In weeks, not months.
